
INSTRUCTIONS FOR USING PULL-APART TOOL

1. This tool is used for separating the case from the bezel. After the screws are removed from the case, insert the tool into the groove on one side of the computer.

2. Squeeze the handles together. The case should start to separate from the bezel.

3. Remove the tool and insert it into the groove on the opposite side of the computer. Squeeze the handles together. Try removing the cover. If the cover will not come off, insert the tool into the groove at the top of the computer and squeeze the handles together. Remove the cover.
